

PERFECT SURFACE, NW

CARE SHEET FOR RESURFACED AREA

Resurfacing is a special spray painting technique used on countertops, bathtubs/showers, appliances, cabinets, and sinks. Your new surface will last longer if the proper precautions for cleaning and caring are done.

To ensure your new surface lasts as long as possible, please follow the following care procedures:

1. Always use **non-abrasive cleaners** such as 401 All Purpose Cleaner, Soft Scrub, or Simple Green.
2. **DO NOT** use Scotch Brite sponge or SOS pads on any of the surfaces. A regular sponge will work just fine.
3. **DO NOT** use Bleach, oven cleaners, or abrasive cleaners such as Comet, Ajax, etc.
4. You should not use your resurfaced counters, tubs, showers, or appliances for **36 hours after resurfacing**.
5. **DO NOT** cut directly on resurfaced kitchen counters.
6. **DO NOT** use appliqués or rubber mats on the bottom of resurfaced tubs and showers.

If you should have any questions in regards to the care of your newly resurfaced counter, tub, shower, sinks, appliances, etc., please feel free to give us a call at 503-968-6162.

Thank you for choosing Perfect Surface NW!
